

*I am attending the Missouri University of Science and Technology in the 2019 fall semester.*

*My grandfather was a director of Cryogenic Technologies for the NASA Apollo 11 moon missions; his involvement with one of our nation's most important scientific achievements has inspired me to pursue a similar career in engineering. I will be double-majoring in Electrical Engineering and Computer Engineering at Missouri S&T. The Braxton Rethwisch Scholarship will provide considerable aid to the financial requirements of my academic plans. I will use this scholarship to offset the tuition fees required by my degree choices and any books and lab fees that may accompany them. I am beyond thankful to the MOACAC for this generous contribution to my educational goals.*
